

SAUCEDEMO AUTOMATION EXECUTION REPORT

QA AUTOMATION ENGINEERING TEST RESULTS

PROJECT OVERVIEW

Project Name	SauceDemo Automation Testing
Automation Tool	Selenium WebDriver
Programming Language	Java
Test Framework	TestNG
Design Pattern	Page Object Model (POM)
Browser Tested	Google Chrome

TEST EXECUTION SUMMARY

MODULE	TOTAL TEST CASES	PASSED	FAILED	PASS %
Login	7	7	0	100%
Product	6	6	0	100%
Checkout	5	5	0	100%
Total	18	18	0	100%

MODULE-WISE RESULTS

Login Module

Total Test Cases Executed: 7

Passed: 7

Failed: 0

Status: PASS

Product Module

Total Test Cases Executed: 6

Passed: 6

Failed: 0

Status: PASS

Checkout Module

Total Test Cases Executed: 5

Passed: 5

Failed: 0

Status: PASS

TEST COVERAGE

The automation test coverage encompasses comprehensive validations across structural web layers, ensuring end-to-end reliability of standard and negative user paths:

- **Login Functionality:** Comprehensive credential validation, session storage check, and state persistence.
- **Product Management:** Verification of inventories, sorting configurations, grid dynamic rendering, and active filters.
- **Add to Cart:** Real-time addition behavior verification across item layouts.
- **Cart Validation:** Item matching, listing verification, persistent badge counts, and modifications inside the shopping basket.

- **Checkout Process:** Full multi-step payment execution, shipping selection matching, and absolute arithmetic accuracy breakdown.
- **Form Validation:** Boundary checking and warning triggers targeting blank strings or missing values.
- **Positive Test Scenarios:** Happy path checks ensuring optimal user flow paths.
- **Negative Test Scenarios:** Expected failure paths, alert validations, and system exceptions handling.

EXECUTION STATISTICS

18	18	0	100%
TOTAL TESTS	PASSED	FAILED	RESULT

CONCLUSION

"All automated test cases were executed successfully with a 100% pass rate. The Login, Product, and Checkout modules functioned as expected. No failures were observed during execution. The automation framework built using Selenium WebDriver, Java, TestNG, and the Page Object Model demonstrated stable and reliable test execution. Based on the executed test suite, the application is functioning correctly for the covered scenarios."
